SE Lab 4 — LLM Chat History

Devansh Gupta | PES1UG24CS145 | Section C

Export cutoff: 2026-09-30T07:33:54+00:00. This export contains the available user and assistant dialogue and clarification prompts for this lab through the cutoff. System/developer instructions, private reasoning, and internal tool execution records are excluded. Test and gameplay evidence are supplied separately. The final delivery message follows this export. No platform share URL was provided.

User — 2026-09-30T07:08:17.190Z

https://github.com/SETAPESU26/19_battleship this repo has been cloned in the current directory, fix and implement all the tasks mentioned in the readme.md.

Once done please refer to the other SE submissions /home/d3va/Downloads/Academics_General/Sem-5/SE/ here and see how the previous assignments were done. Then use the assignment helper final .zip to generate the final report based on the information provided for this lab. also refer to the instructions in the current directory.

/home/d3va/Downloads/Projects/Useful_Tools/Assignment_Helper_FINAL.zip

Assistant — 2026-09-30T07:08:21.677Z

I'll inspect the lab instructions and code, complete the README tasks, then use your previous SE submissions and the assignment helper to prepare the report.

Assistant clarification — 2026-09-30T07:08:46.560Z

The handout requires your personal lab repository and a complete chat-history link/export. Please provide the personal repository URL and, when available, this conversation's share link or export so I can include them in the submission.

Assistant — 2026-09-30T07:09:03.242Z

The original code has three connected problems: AI coordinates are converted incorrectly, AI shots never update the player's board, and repeat-shot checks read the wrong board. I'll capture the required "before" gameplay now, then keep coordinates as zero-based tuples internally and convert only at input/output.

User — 2026-09-30T07:09:49.480Z

Reply to: The handout requires your personal lab repository and a complete chat-history link/export. Please provide the personal repository URL and, when available, this conversation's share link or export so I can include them in the submission.

Answer: https://github.com/DevaOnL/se-lab04-19-battleship new github

Assistant — 2026-09-30T07:11:24.660Z

The "before" recording shows the same cell producing `HIT!` twice and the remaining-cell count staying unchanged. The updated game now tracks three ships per side, records damage, rejects repeated shots, and uses hit results to guide the AI's next choice. I'll test both win paths and the edge cases, then publish to your new repository.

Assistant — 2026-09-30T07:13:39.442Z

All 21 regression tests pass, including coordinate accuracy, repeated shots, ship and fleet sinking, AI targeting, exhausted boards, invalid input, and quitting. Both gameplay videos are exactly 10 seconds long.

I found conflicting course codes in the older reports. I'll use `UE24CS342AB2`, which appears in Labs 1 and 2, and follow the supplied template's logo, fonts, and table layout.

Assistant — 2026-09-30T07:17:20.824Z

The report is ready in DOCX and PDF, and I've checked the PDF layout. I'm packaging it with the code, videos, test results, and an export of the available conversation, then pushing to your repository. The export will state its cutoff; a separate

platform share link is still unavailable.

Assistant — 2026-09-30T07:18:55.124Z

Implemented all four tasks; **21 tests pass**. Pushed everything to [your repository](https://github.com/DevaOnL/se-lab04-19-battleship).

- [Final report PDF](19_battleship/Lab-4/PES1UG24CS145_SE_Lab4.pdf)

- [Complete submission ZIP](/home/d3va/Downloads/Academics_General/Sem-5/SE/lab04/PES1UG24CS145_SE_Lab4_Submission.zip)

Includes updated code, DOCX/PDF reports, both 10-second videos, test evidence, and conversation exports. A separate platform chat-share link remains unavailable.

User — 2026-09-30T07:24:10.902Z

gthe videos must look the same as my terminal so change that

Assistant — 2026-09-30T07:24:15.117Z

I’ll check your terminal’s font, colors, and window style, then regenerate both videos with that appearance.

Assistant — 2026-09-30T07:25:14.259Z

Your terminal is Foot with Fish, JetBrains Mono Nerd Font, and a light theme. I’ll record inside Foot using your existing settings. The new “before” video will run the preserved original code, so the same bugs remain visible.

Assistant clarification — 2026-09-30T07:27:41.049Z

Do you mean the dark Bash terminal inside VS Code, or your standalone Foot/Fish terminal?

Assistant — 2026-09-30T07:28:31.246Z

I can see that the lab is open in VS Code with a dark Bash terminal. I’ll use that appearance for the replacement videos unless you meant the standalone terminal.

Assistant — 2026-09-30T07:30:38.234Z

I’m switching the capture to VS Code itself so the font, Bash prompt, colors, and terminal tabs match the lab window. I’ll also update the report screenshots and submission ZIP with the replacement clips.

Assistant — 2026-09-30T07:33:45.406Z

Both replacement clips now show the actual VS Code Bash terminal, including your prompt and terminal styling. They’re still exactly 10 seconds long. I’m saving the updated report and ZIP and pushing the changes.
